Art Unit: 2828

DETAILED ACTION

1. Applicant's arguments with respect to claims 1-3,5,7-10, and 16-29 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3, 5, and 7, 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 25 recites "a microelectronic structure" and which fails to define the structure. The claims are not clear and infinite.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3,5,7-10, and 16-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ho et al. ('496) in view of Ho et al. ('070).

Art Unit: 2828

With respect to claims 1-2, 16, 25 Ho ('496) discloses in Figure 5 a device comprising an optical disk-shaped resonator, which is in the shape of a disc, formed of a core portion in a silicon material, and a cladding layer except for the core being made of silicon material and the cladding being made of optically active material, and said silicon material fabricated to include a microelectronic structure. Ho ('070) discloses in Figure 1 an active cavity which also comprises a core and a cladding. For the improvement of the device, it would have been obvious to the one having ordinary skill in the art at the time the invention was made to provide a disk-shaped resonator with active cladding and in active core to amplify the optical energy from the core as taught by Ho ('070). Ho ('070) also discloses a pump laser optically pumping the cladding layer (col. 7, lines 24-29).

With respect to claims 3, 5, and 26-28, Ho ('070) discloses active cladding being doped with erbium and made of a semiconductor material (col. 7, lines 1-10).

With respect to claim 7, it is inherent that the lasing in resonator only occurs when optical energy form the pump laser is continuously pumped.

Claims 8-10 further recites a method of amplifying light. Since Ho discloses the products, it is inherent product by process for performing a method as recited in the claims.

With respect to claims 17-19, Ho discloses the claimed invention as shown in rejection of claims 3 and 5.

With respect to claims 20-24, Ho ('496) discloses in Figure 8 the rotating disk shaped resonator. Since Ho discloses the product, it is inherent product by process for performing that method.

Art Unit: 2828

With respect to claims 29, Ho ('496) and ('070) both dislose the pump beam being resonant in the resonator.

Citation of Pertinent References

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The patent to Ho et al. discloses Photonic Wire Microcavity Light Emitting Devices, U.S. Patent No. 5878070

The patent to Ho et al. discloses Semiconductor Micro-Resonator Device, U.S. Patent No. 5926496

Communication Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Nguyen whose telephone number is 571-272-1947. The examiner can normally be reached on 8:30 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, PAUL IP can be reached on 571-272-1241. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
